One venture decision, three things we currently assume

RESEARCH OBJECTIVE

Confirm that shoppers already managing a diet-sensitive condition (Segment A) are the right priority user, and find the exact moment in their current online shop where the missing nutrition signal causes the most frustration — so the tool is built to intervene there first.

1 Frequency & severity

WE ASSUME

This is a recurring weekly frustration for segment-A shoppers, not a rare, one-off problem.

WRONG IF…

If false: the problem is occasional, and a browser tool may be the wrong level of intervention.

2 Alternatives fall short

WE ASSUME

Current workarounds — memorised rules, label-reading, asking others — fail often enough that wrong-fit items still reach the cart.

WRONG IF…

If false: shoppers already cope well, and the tool adds little.

3 Where it peaks

WE ASSUME

Friction peaks at the moment of evaluating a specific product — more than at browsing, cart review or checkout.

WRONG IF…

If false: the journey map should flag a different stage as the priority build target.

PRIORITY PARTICIPANTS Segment A — adults advised to limit sugar, salt or fat, who shop groceries online weekly. **Minimum evidence: 3 interviews + 1 observation**

Prepared before interviews, so each assumption can be confirmed or contradicted by real evidence — not adjusted to fit it.

What we actually did, and the evidence that stood out

INTERVIEWS CONDUCTED	OBSERVATIONS CONDUCTED	FIT SEGMENT A	FIELDWORK DATES
_ / 3	_ / 1	_ / _	— to —

ID	Quote or observation	Context	Why it matters
P01 *interview*	*INSERT quote or described behaviour, in their own words*	*INSERT context: when, where, what prompted it*	*INSERT why this matters for the venture decision*
P02 *interview*	*INSERT quote or described behaviour, in their own words*	*INSERT context: when, where, what prompted it*	*INSERT why this matters for the venture decision*
P03 *interview*	*INSERT quote or described behaviour, in their own words*	*INSERT context: when, where, what prompted it*	*INSERT why this matters for the venture decision*
OBS-1 *observation*	*INSERT quote or described behaviour, in their own words*	*INSERT context: when, where, what prompted it*	*INSERT why this matters for the venture decision*

Keep full interview notes in the separate evidence log; only the standout evidence belongs on this slide.

What repeats across participants, and what it means

Evidence chain: *Evidence (what one person said or did) → Pattern (what repeats across participants) → Insight (the deeper truth it points to).*

1

PATTERN

INSERT what repeats across at least two participants

INSIGHT

INSERT the deeper truth: the tension, motivation or consequence underneath

EVIDENCE FROM

INSERT P0_, P0_...

2

PATTERN

INSERT what repeats across at least two participants

INSIGHT

INSERT the deeper truth: the tension, motivation or consequence underneath

EVIDENCE FROM

INSERT P0_, P0_...

3

PATTERN

INSERT what repeats across at least two participants

INSIGHT

INSERT the deeper truth: the tension, motivation or consequence underneath

EVIDENCE FROM

INSERT P0_, P0_...

A pattern is what multiple participants did or said. An insight explains the tension, motivation or consequence underneath it — it should not just restate the pattern.

The persona, built only from evidence

Persona: *[name or alias — only if evidence supports one]* Segment A — condition manager (confirm against evidence) **Represents _ / 3 interviews**

Who they are	*INSERT only context that matters to the problem — no invented demographics*	**Current alternatives**	*INSERT how they manage the problem today*
Primary goal	*INSERT what they are trying to achieve*	**Motivations**	*INSERT what drives their decisions*
Key behaviours	*INSERT what they actually do today*	**Constraints**	*INSERT what limits their choices*
Needs	*INSERT what is not being met today*	**Representative quote**	*INSERT a real, anonymised quote (P0_)*
Pain points	*INSERT what repeatedly creates difficulty*	**Key insight**	*INSERT the single most important evidence-backed truth for the venture team*

Quality check: every line below must trace to a participant ID. If it can't, cut it — no invented demographics, hobbies or preferences.

How Segment A experiences the problem today — before this tool exists

1 Plan the shop

Action
INSERT what they do

Thought & feeling
INSERT what they think and feel

Touchpoint
INSERT who or what they interact with

Pain point & workaround
INSERT the friction, and what they do instead

Evidence
INSERT P0_ / OBS-1

Opportunity
INSERT what might improve here

Evidence
INSERT P0_ / OBS-1

Opportunity
INSERT what might improve here

This maps today's experience, not the proposed product: no app screens, no accounts, no badges — only what the persona currently does, thinks and feels.

Three opportunity areas, and what remains uncertain

1 *INSERT short name for this opportunity*

WHAT HAPPENS?

INSERT the evidence-backed problem

WHY IT MATTERS

INSERT the consequence

INSIGHT

INSERT what explains it underneath

STILL UNCERTAIN

INSERT what this still needs to validate

2 *INSERT short name for this opportunity*

WHAT HAPPENS?

INSERT the evidence-backed problem

WHY IT MATTERS

INSERT the consequence

INSIGHT

INSERT what explains it underneath

STILL UNCERTAIN

INSERT what this still needs to validate

3 *INSERT short name for this opportunity*

WHAT HAPPENS?

INSERT the evidence-backed problem

WHY IT MATTERS

INSERT the consequence

INSIGHT

INSERT what explains it underneath

STILL UNCERTAIN

INSERT what this still needs to validate

REMAINING QUESTIONS — not yet answered by this research

Who pays for this — shopper, retailer or health partner — is still unresolved from Assignment 2.

INSERT a question this research raised but did not answer.

INSERT a question this research raised but did not answer.

Opportunity areas, not solutions: we name where the evidence points, not what to build there.
