# Our hypothesis: Kenyan online shoppers choose blind on sugar, salt and fat

1 · VENTURE IDEA

A Chrome extension that shows a Nutri-Score grade and condition-specific warnings beside products on Naivas Online and Carrefour Kenya, so shoppers see nutrition quality before they pay.

Nutri-Score grade, rendered at the point of purchase

Runs fully in the browser · 10,518 products · 2 retailers

2 · PROBLEM HYPOTHESIS (what we believed before any interview)

Shoppers who need to limit sugar, salt or fat cannot tell, at the moment they add an item to an online cart, whether it fits their limits. Kenyan retailers show no front-of-pack signal online, and on-pack labels are too incomplete to work it out: added sugar is not even a mandatory label field.

3 · PRIMARY USER (hypothesis)

Adults who buy groceries online in Kenya (Naivas Online, Carrefour Kenya) and must or want to control sugar, salt or fat for health reasons, starting with people already advised to do so.

**0**

Kenyan online retailers surface a front-of-pack nutrition signal (Food-EPI, 2020)

**0**

Chrome extensions score Kenyan grocery sites (competitive scan, June 2026)

**23.8%**

of Kenyan adults have raised blood pressure (STEPS 2015)

*Sources: Food-EPI Kenya 2020; internal competitive scan EV-004 (June 2026); ATNi / EAMA Kenya Market Assessment 2025; Kenya STEPS Survey 2015.*

# Three unproven beliefs decide whether this problem is real

## 1 Need at the cart

**WE BELIEVE**

At the cart, shoppers cannot tell whether a product fits their sugar, salt or fat limits.

**WRONG IF…**

They already know what to buy, or they do not check nutrition when shopping online.

**ASK**

*“Tell me about the last time you did your grocery shop online. What happened?”*

## 2 Today’s fix falls short

**WE BELIEVE**

Current workarounds (reading packs, memorised rules, asking others) cost time or stress and still lead to wrong choices.

**WRONG IF…**

Their workaround is quick and reliable, and they are satisfied with it.

**ASK**

*“How are you dealing with it now? What does it cost you in time, money, effort or stress?”*

## 3 Channel and trust

**WE BELIEVE**

They shop groceries in a desktop browser, not only in an app, and lean on outside sources to judge a food product.

**WRONG IF…**

They shop mostly in a retailer’s phone app, or trust only brand and pack claims.

**ASK**

*“Which device and site or app do you use? How do you decide what to trust about a food product?”*

### Do not pitch

Understand the problem, not sell the idea

### At least 3 people

Who genuinely live the problem

### Ask for the last time

Stories beat opinions

### Anonymise

P1, P2, P3. No names, no diagnoses

*Interview questions follow the Assignment 1 guidance. None of them mentions or demonstrates the tool.*

# Evidence: what three shoppers do, what frustrates them, how they cope

| | P1<br>age band · area · web or app | P2<br>age band · area · web or app | P3<br>age band · area · web or app |
|---|---|---|---|
| **What they do**<br>Last online shop, step by step | *INSERT P1* | *INSERT P2* | *INSERT P3* |
| **What frustrates them**<br>The hardest moment | *INSERT P1* | *INSERT P2* | *INSERT P3* |
| **How often, and cost**<br>Times a month · time · money · stress | *INSERT P1* | *INSERT P2* | *INSERT P3* |
| **How they cope today**<br>Workaround or what they tried | *INSERT P1* | *INSERT P2* | *INSERT P3* |

**STRONGEST QUOTE**

“

*INSERT the one verbatim sentence that best captures the problem, in the participant's own words.*

*— P_ , age band, area (anonymised)*

Use exact words. Trim it, do not paraphrase it.

*Anonymise every participant. Record no names, diagnoses or other sensitive health details. Desk evidence for the hypothesis is on slide 1.*

# Decision: is the problem real enough to keep building for?

## 7 · VALIDATION DECISION

### ○ Validated

At least 2 of 3 describe the problem unprompted, recently, with a real cost.

### ○ Partially validated

Real, but narrower: only some users, contexts or shops feel it.

### ○ Not validated

Few describe it, or they do not care enough to act on it.

## ASSUMPTION SCORECARD

| Assumption | P1 | P2 | P3 | Result |
|---|---|---|---|---|
| 1 Need at the cart | ○ | ○ | ○ | _ / 3 |
| 2 Today's fix falls short | ○ | ○ | ○ | _ / 3 |
| 3 Channel and trust | ○ | ○ | ○ | _ / 3 |

## 8 · REVISED PROBLEM STATEMENT

**Working draft, sharpened by desk evidence:** Adults in Kenya who must limit sugar, salt or fat cannot see, when they add an item to an online grocery cart, whether it fits their limits, because retailers show no front-of-pack signal and labels omit fields such as added sugar.

*INSERT the version rewritten in participants' words after the interviews.*

## FINAL REFLECTION · CONTINUE AS DEFINED?

**Validated** continue, then pick the priority segment (Assignment 2)

**Partially** narrow to the group or context that felt it

**Not validated** stop and choose a different problem

*INSERT your answer and why, in 2–3 sentences.*

*Decision rule proposed by the team before interviews, so the verdict cannot drift away from the evidence. Mark ✓ confirmed · ~ partly · ✗ contradicted.*
